

Setting the Standard for Automation™

Cybersecurity Training Course

1st – 3rd May 2019, Rochestown Park Hotel
Cork, Ireland

The only ISA/IEC 62443 Training with Official Certification (*)

Assessing the Cybersecurity of New or Existing IACS Systems [\(IC37\)](#)

The first phase in the IACS Cybersecurity Lifecycle (defined in ISA 62443-1-1) is to identify and document IACS assets and perform a cybersecurity vulnerability and risk assessment in order to identify and understand the high-risk vulnerabilities that require mitigation. Per ISA 62443-2-1 these assessments need to be performed on both new (i.e. greenfield) and existing (i.e. brownfield) applications. Part of the assessment process involves developing a zone and conduit model of the system, identifying security level targets, and documenting the cybersecurity requirements into a cybersecurity requirements specification (CRS).

This course will provide students with the information and skills to assess the cybersecurity of a new or existing IACS and to develop a cybersecurity requirements specification that can be used to document the cybersecurity requirements the project.

Visit; www.cybersecurity-expert.com for more information about becoming a cybersecurity expert.
