What are we doing this evening?

Incident response tabletop exercise

- A tabletop exercise, or TTX, is a role-playing activity with a simulated scenario.
- Players typically play their own role and respond to scripted events (injects) based on corporate policies, plans, and procedures.
- A TTX provides a safe environment to test strengths and weaknesses during handling of an incident, i.e. a cybersecurity attack.

Goals of a TTX

- Creates routine (training) in cybersecurity incident handling without interfering with operational systems
- Identifies strengths and weaknesses / gaps in existing plans and procedures.
